I possess a solid technical aptitude in Full Stack development, with a primary emphasis on JavaScript. I specialize in employing React and Redux for frontend development and leveraging Node.js, MongoDB, and Express for backend operations.

My professional background includes collaborating effectively within a team environment. I have held the role of a team leader on a small-scale project, demonstrating leadership and organizational skills. I excel in managing GitHub repositories, deploying applications, and delivering precise time estimates for task completion.

TECHNICAL SKILLS

- HTML5/CSS3/SASS
- Responsive/Adaptive design
- JavaScript
- TypeScript
- React/Next.js
- Redux
- REST API
- Node.js
- MongoDB/PostgreSQL
- Express

Mate Academy

2022 - 2023

MANAGER LOGISTICS

Poltava National Technical University

2018 - 2022

WORK EXPERIENCE

Information Technology Specialist

Aurora Multimarket

6 months

- Worked on the functionality of the CRM system:
 - Maintained existing functionality written in C# and JS and wrote new functionality.
 - Wrote new functionality with the addition of C# components and the OOP paradigm.
 - Wrote components using JavaScript.
- Created the logic of interaction between the CRM system and other services:
 - Created API interaction based on REST requests using C# and JavaScript programming languages.
- Conducted testing and review of the code of the CRM system components for error analysis and stable operation.
- Worked in a team of several people to create functionality, and also worked alone to implement features
- I worked on the implementation of data transfer to Google BigQuery using a server written by me in Node.js, and components of the CRM system working in JavaScript and C#.

PROJECT EXPERIENCE

Product Catalog

[GitHub](#) [Demo](#)

Next.js, Bootstrap, Animate.css, Socket.io, TS, JS, I18next

- Using Next.js for the best page rendering experience.
- Using Socket.io to display the number of users viewing your website

Kanban Board

[GitHub](#) [Demo](#)

React, JavaScript, TypeScript, LocalStorage

- A fairly simple kanban board for displaying cases
